

The compact high performance rain head

- ✓ NO MORE blocked gutters or flooded eaves!
- ✓ NO MORE vermin or mosquitoes in the water system
- ✓ Screen adjusts for various debris and rainfall
- ✓ Includes stainless steel mozzie screen and flow directional gutter outlet
- ✓ Ideal for use with under eaves water tanks
- ✓ Four variants available to suit popular downpipes – round and rectangular; PVC and metal
- ✓ Improves rainwater tank quality and reduces tank maintenance

leaf beater®

The compact high performance rain head

The Leaf Beater® works like the Leaf Eater® and is more compact making it **ideal for use with under eaves tanks**.

The Leaf Beater® features an integrated flow directional gutter outlet which directs the flow of water from the gutters onto an **adjustable elliptical primary screen** of 6mm aperture. This screen is virtually vertical enabling the action of the water to wash the screen and **minimise maintenance**. A secondary stainless steel screen is also included to keep mosquitoes and vermin out of downpipes in a “wet” system.

With the removal of the secondary screen, the Leaf Beater® is ideal for use purely as a **debris removing device** even when rainwater is not being collected.

How it works

An ingenious feature has been incorporated into the operation of the primary screen. **Four settings** can be applied to vary the angle at which the elliptical primary screen faces to **adjust for various intensities of rainfall and amounts of debris**. After observing the performance of the Leaf Beater®, the screen can be adjusted until the best operating setting is achieved.

How it is installed*

The Leaf Beater® is usually mounted **directly under the roof gutter**, however can be **mid-mounted** on a wall **to make it easier to access for cleaning**. The Leaf Beater® range includes **four variants** and connects with **PVC and metal downpipes**.

1. For round downpipes – 80/90mm dual fit and 100mm sizes,
2. For rectangular downpipes – 100mm x 50mm and 100mm x 75mm sizes

When rainwater is being collected in tanks, a Leaf Beater® should be installed **at each downpipe that supplies water** to the tank.

Install the complete system

A rain harvesting system that incorporates **rain heads** together with a **gutter mesh system** (such as Blue Mountain All Steel Mesh) to divert leaves and debris, and **first flush** water diverter/s will deliver optimum results.

The angle of the primary screen on the Leaf Beater® can be adjusted depending on the intensity of rainfall and the amount of debris in the area.

Rain  Harvesting

- Protect the home by removing debris
- Can be mounted at gutter downpipe or wall mounted
- Developed and manufactured in Australia
- Can be painted to colour match the home
